

WHAT TO KNOW & EXPECT FROM YOUR NEW ZONED SYSTEM

Understanding your zoned system will help you make the most of it, ensuring both comfort and efficiency in your home.

BENEFITS OF A ZONED SYSTEM:

- **Ability to Serve Multiple Floors:** With just one system, you can efficiently manage heating and cooling for multiple floors and larger spaces. This reduces the amount of equipment needed and, in turn, reduces maintenance requirements.
- **Increased Comfort:** Zoning allows you to have multiple sensors or thermostats placed throughout your home, enhancing comfort by tailoring the climate to different areas.
- **Increased Efficiency:** Zoning ensures that only the spaces being occupied are heated or cooled. If you or your family don't use certain rooms during specific times, there's no need to heat or cool them. When the system only needs to condition a portion of the home, it runs at a lower capacity, using less energy.
- **Decreased Noise at the Outdoor Unit:** The outdoor unit will rarely need to run at a higher speed when it's only conditioning a section of the home. This leads to quieter operation of the outdoor condenser.
