

# Your Summer Comfort Checklist

Preparing to stay comfortable throughout the warm California summer temperatures should involve more than just pulling out the flip flops and swimsuit tops — you need to make sure your air conditioner is ready for its day in the sun!

Follow this checklist to ensure your cooling equipment is running at peak efficiency, so you can avoid unexpected AC breakdowns and high cooling bills this year in your home:

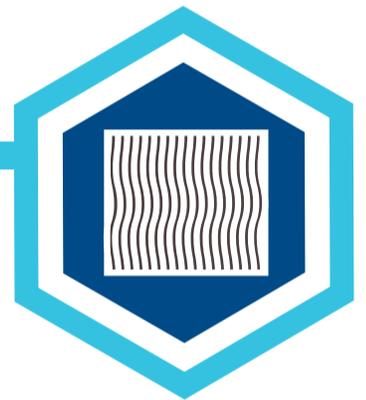

## CLEAN UP THE AREA AROUND YOUR AC COMPRESSOR

Clear any languishing debris, like twigs, leaves and brush, leaving at least two feet of space around your outdoor compressor clear from obstructions.

## REPLACE THE AIR FILTERS

Your air filters should be regularly replaced as they fill with harmful contaminants, and particles like dirt and dust.

## SCHEDULE PROFESSIONAL MAINTENANCE BEFORE THE BIG RUSH

Professional maintenance ensures that your air conditioner is operating at its absolute best, and will provide cool air for your home throughout the duration of the summer.

## REPLACE YOUR AC BEFORE PEAK SUMMER TEMPS

Is your air conditioner beyond repair, or just too old? Upgrading now to a high efficiency air conditioner or ductless mini split before the triple digit temperatures arrive, to ensure an efficient and cool summer.

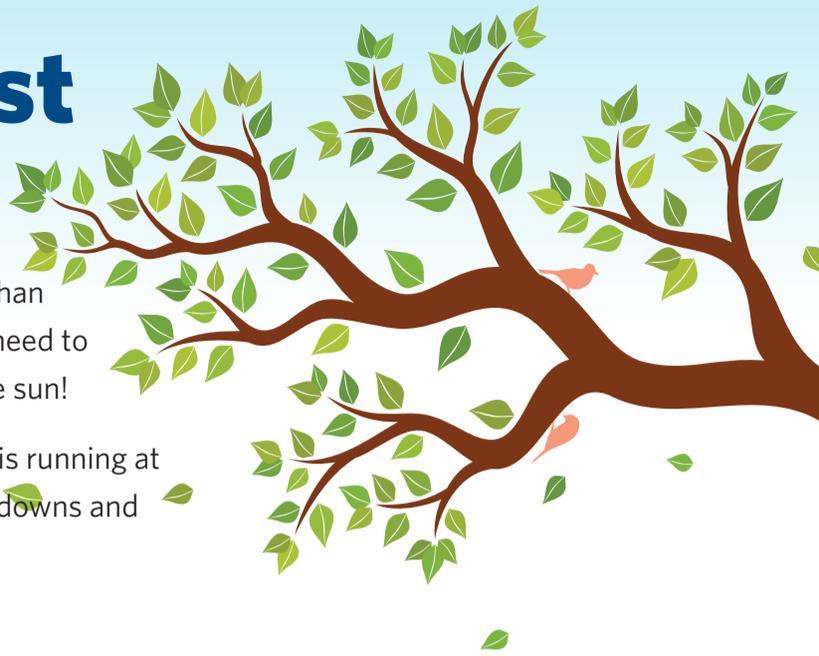

**Caring for your cooling equipment now will save you money, a headache, and some sweat in the future. Schedule AC maintenance and repair with the cooling experts that Alameda, Marin, and Contra Costa County homeowners trust — EXPERIENCE THE HASSLER DIFFERENCE TODAY!**
